**NOTES:** After making the countertop cutout, some installations may require notching down the base cabinet side walls to clear the cooktop base. To avoid this modification, use a base cabinet with side walls wider than the cutout. If cabinet has a drawer, a 4" (10.2 cm) depth clearance from the countertop to the top of the drawer for other obstruction in base cabinet is required. The drawer depth may need to be shortened to avoid interfering with the regulator.

**IMPORTANT:** If a built-in wall oven is to be installed below the cooktop, the pressurized outlet and gas supply piping must be located in an adjacent cabinet.

This cooktop and its gas and electric supply sources must be installed before the undercounter built-in wall oven is installed.
