⚠ WARNING

Electrical Shock Hazard

Plug into a grounded 3 prong outlet.

Do not remove ground prong.

Do not use an adapter.

Do not use an extension cord.

Failure to follow these instructions can result in death, fire, or electrical shock.

Before you move your refrigerator into its final location, it is important to make sure you have the proper electrical connection.

Recommended Grounding Method

A 115 volt, 60 Hz., AC only, 15- or 20-amp fused, grounded electrical supply is required. It is recommended that a separate circuit serving only your refrigerator be provided. Use an outlet that cannot be turned off by a switch. Do not use an extension cord.

IMPORTANT: If this product is connected to a GFCI (Ground Fault Circuit Interrupter) protected outlet, nuisance tripping of the power supply may occur, resulting in loss of cooling. Food quality and flavor may be affected. If nuisance tripping has occurred, and if the condition of the food appears poor, dispose of it.

NOTE: Before performing any type of installation or cleaning, remove the top grille and turn the master power switch to OFF or disconnect power at the circuit breaker box.

When you are finished, turn ON the master power switch or reconnect power at the circuit breaker box. Then reset the control to the desired setting.

AIRFLOW VENTING RECOMMENDATIONS CLOSED SOFFIT CABINET

- Depth of cabinet must be less than 25" (63.5 cm).
- Height of soffit must not exceed 84" (213.3 cm).
- Following illustrations explain the cabinet construction (soffit and rear wall positions) required for optimum ventilation and airflow.

Grey arrow = ambient air; Black arrow = warm air
Cabinet depth 25" and soffit located at 84", provides proper airflow/ventilation to the refrigerator. Efficient cooling is achieved.
Cabinet depth more than 25" and/or soffit located at more than 84", causes air gap at back and/or top of the refrigerator. Air gap allows warm air recirculation causing loss in cooling efficiency.

- If your opening does not meet these requirements, you will need to make modifications.

ELECTRICAL REQUIREMENTS

If codes permit and a separate ground wire is used, it is recommended that a qualified electrical installer determine that the ground path and the wire gauge are in accordance with local codes.

Check with a qualified electrical installer if you are not sure the oven is properly grounded.

This oven must be connected to a grounded metal, permanent wiring system.

Be sure that the electrical connection and wire size are adequate and in conformance with the National Electrical Code, ANSI/NFPA 70-latest edition or CSA Standards C22.1-94, Canadian Electrical Code, Part 1 and C22.2 No. 0-M91-latest edition, and all local codes and ordinances.

A copy of the above code standards can be obtained from:

National Fire Protection Association
1 Batterymarch Park
Quincy, MA 02169-7471
CSA International
8501 East Pleasant Valley Road
Cleveland, OH 44131-5575

- Models rated from 7.3 to 9.6 kW at 240 V (5.4 to 7.4 kW at 208 V) require a separate 40 A circuit. Models rated at 4.8 kW and below at 240 V (3.6 kW and below at 208 V) require a separate 20 A circuit.
- A circuit breaker is recommended.
- Connect directly to the circuit breaker box (or fused disconnect) through flexible, armored, or nonmetallic sheathed, copper cable (with grounding wire).
- Flexible conduit from the oven should be connected directly to the junction box.
- Fuse both sides of the line.
- Do not cut the conduit. The length of conduit provided is for serviceability of the oven.
- A UL listed or CSA approved conduit connector must be provided.
- If the house has aluminum wiring, follow the procedure below:
Connect the aluminum wiring using special connectors and/or tools designed and UL listed for joining copper to aluminum.
Follow the electrical connector manufacturer's recommended procedure. Aluminum/copper connection must conform with local codes and industry accepted wiring practices.

For power requirements for models JJW2827I, JJW2830I and JJW3830I, refer to the following table.

MODEL	240 VAC	208 VAC
	kW	kW
JJW2827I	8.7	6.5

Install Custom Panel

Custom panel dimensions

*This dimension is for 4" (102 mm) toe-kick. If the installation needs a higher toe-kick, adjust the height of the wood panel accordingly except on models with fan-assisted dry. Fan models may have a duct at the bottom of the door that would be exposed if you shorten the door panel for toe-kick heights above 4" (102 mm). Toe-kick heights greater than 6" (152 mm) are not recommended for this product.

Follow Steps Below:

A customer supplied door panel and handle (together) must weigh no more than 16 lbs (7.3 kg) and must be made to specific dimensions. It is recommended that a cabinetmaker cut the customer panel because of the precise dimensions needed.

NOTES:

- The handle for the custom panel is not included.
- All mounting hardware supplied is for a $\frac{3}{4}$ " (19 mm) thick wood panel. If a thinner wood panel or materials other than wood are used, it is the customer's responsibility to obtain the proper length screws and adjust the pilot holes accordingly.
- If a custom wooden kick plate is to be installed over the dishwashers' metal access panel, the height must not exceed 3" (76 mm) from the bottom of the metal access panel.

IMPORTANT: Use a moisture-resistant sealer on both sides and all edges of the panel and any wooden kick plates to avoid damage from moisture.

INSTALLATION INSTRUCTIONS

PREPARING THE ENCLOSURE

Gloves and safety goggles should be worn during installation.

It is not recommended to install the appliance into a corner or directly beside a wall. The door will need to be opened more than 90° to allow full extension of the shelves. If it is necessary to place the unit next to a wall or in a corner, leave at least 2-4 inches (5-10 cm) of space between the wall and the appliance to allow for the door opening.

The cabinet opening must be at least 24 inches (61 cm) wide by 35 inches (88.9 cm) high by 25 inches (63.5 cm) deep.

Note: The listed depth requirement is assuming that the electrical outlet is located in the adjacent cabinetry or flush mounted in the rear wall, not surface mounted inside the enclosure.

If the electrical outlet is located inside adjacent cabinetry, cut a 1.5 inch (3.8 cm) diameter hole to admit the power cord. If the cabinet wall is metal, the hole edge must be covered with a bushing or grommet.

REQUIRED TOOLS

- Safety goggles
- Gloves
- Tape measure
- Carpenter square
- Level
- Flashlight
- Electric drill with hole bit
