Relocate standard kitchen
Light to be centered over island

BLK 33
TH 1

A hand-drawn floor plan of a kitchen island. The island is rectangular and filled with a grid pattern. A central light fixture is indicated by a circle with a crosshair. The island is labeled 'KITCHEN ISLAND' in the center. To the right of the island, there is a red curved line and the text 'BLK 33' and 'TH 1'. Above the island, there is handwritten text in red: 'Relocate standard kitchen' and 'Light to be centered over island'.

CHECKING THE INSTALLATION SITE

Clearances and dimensions

To install the range, refer to the following figure.

CAUTION This range has been designed to comply with the maximum allowable wood cabinet temperatures of 194 °F. Make sure the wall covering, countertops, and cabinets around the range can withstand the heat (up to 194 °F) generated by the range. If not, discoloration, delamination, or melting may occur.

CAUTION You must use the rear filler kit to install the range in a freestanding cutout cabinet. For more information, see "Optional rear filler kit" as shown below.

Optional rear filler kit

Used to fill gap between the range back and wall. Adds a filler strip to the rear of the range. This kit can only be used when the opening in the countertop is 25" deep.

✍ If the countertop depth is greater than 25", there will be a gap between the filler kit and the back wall.

01 PREPARING TO INSTALL THE RANGE

Minimum dimensions

★ IMPORTANT To eliminate the risk of burns or fire caused by reaching over heated surface units, avoid having cabinet storage space located above the surface units. If you have cabinet storage space over the heating elements, you can reduce the risk by installing a range hood that projects horizontally a minimum of 5 inches beyond the bottom of the cabinets.

- * A minimum of 30" is required between the top of the cooking surface and the bottom of an unprotected wood or metal cabinet; a minimum of 24" is required if the bottom of the wood or metal cabinet is protected by not less than 1/4" of flame retardant millboard covered with not less than no.28 MSG of sheet steel, 0.015" of stainless steel, 0.024" of aluminum, or 0.020" of copper.
- ** A minimum of 15" is required between the countertop and the adjacent cabinet bottom.

connecting the power

STEP 1. MEETING ELECTRICAL CONNECTION REQUIREMENTS

CAUTION For personal safety, do not use an extension cord with this appliance. Remove the house fuse or open the circuit breaker before beginning installation.

This appliance must be supplied with the proper voltage and frequency, and be connected to an individual, properly grounded branch circuit, protected by a circuit breaker or fuse having amperage as specified on the rating plate. The rating plate is located above the drawer on the oven frame. (Fig. 1 or Fig. 2)

We recommend you have the electrical wiring and hookup of your range connected by a qualified electrician. After installation, have the electrician show you where your main range disconnect is located.

Check with your local utilities for electrical codes which apply in your area. Failure to wire your oven according to governing codes could result in a hazardous condition. If there are no local codes, your range must be wired and fused to meet the requirements of the National Electrical Code, ANSI/NFPA No. 70-Latest Edition. You can get a copy by writing:

National Fire Protection Association
Batterymarch Park
Quincy, MA 02269

(Fig. 1)

(Fig. 2)

Effective January 1, 1996, the National Electrical Code requires that new construction (not existing) utilize a 4-conductor connection to an electric range.

When installing an electric range in new construction, follow Steps 2 and 3 for a 4-wire connection.

You must use a 3-wire or 4-wire, single-phase A.C. 208Y/120 Volt or 240/120 Volt, 60 hertz electrical system.

If the electrical service provided does not meet the above specifications, have a licensed electrician install an approved outlet.

Use only a 3-conductor or a 4-conductor UL-listed range cord. These cords may be provided with ring terminals on the wire and a strain relief device.

A range cord rated at 40 amps with 125/250 minimum volt range is required. A 50 amp range cord is not recommended but if used, it should be marked for use with nominal 1 3/8" diameter connection openings. Care should be taken to center the cable and strain relief within the knockout hole to keep the edge from damaging the cable.

- Because range terminals are not accessible after the range is in position, a flexible service conduit or cord must be used.

NOTE If conduit is being used, go to Step 4 on page 12.

ALL NEW BRANCH-CIRCUIT CONSTRUCTIONS, MOBILE HOMES, RECREATIONAL VEHICLES, AND INSTALLATIONS WHERE LOCAL CODES DO NOT ALLOW GROUNDING THROUGH NEUTRAL, REQUIRE A 4-CONDUCTOR UL-LISTED RANGE CORD.

STEP 2. ACCESSING THE POWER CORD CONNECTION

Loosen and then remove the rear access cover screw with a screwdriver. Remove the rear access cover by lifting it up and then out. The terminal block will then be accessible.

Specified power-supply-cord kit rating

Range rating, watts		Specified rating of power-supply-cord kit, amperes	Diameter (inches) of range connection opening	
120/240 volts 3-wire	120/208 volts 3-wire		Power cord	Conduit
8750 - 16500	7801 - 12500	40 or 50 A	1 3/8"	1 1/8"

For power cord installations, go to page 10. For conduit installations, go to page 12.

STEP 3. INSTALLING THE POWER CORD

For power cord installations, hook the strain relief over the power cord hole (1 $\frac{3}{8}$ ") located below the rear of the drawer body. Insert the power cord through the strain relief and tighten the device.

- You must install the power cord with a strain relief.
- Attach the strain relief to the 1 $\frac{3}{8}$ " opening in the conduit connection plate.

Installing a 3-wire power cord

WARNING

WARNING The neutral or ground wire of the power cord must be connected to the neutral terminal located in the center of the terminal block. The power leads must be connected to the lower left and the lower right terminals of the terminal block.

1. Remove the 3 lower terminal screws from the terminal block.
2. Insert the 3 terminal screws through each power cord terminal ring and into the lower terminals of the terminal block. Be certain that the center wire (white/neutral) is connected to the center lower position of the terminal block.
3. Tighten screws securely to the terminal block. **DO NOT remove the ground strap connection.**
4. Go to **Step 5** on page 15 to continue with the installation.
